DETAILED ACTION

Allowable Subject Matter

Claims 1-24 are allowed.

The following is an examiner's statement of reasons for allowance:

Claims 1, 11 and 18 state that the first and second channels are co-channels between a base station and a mobile station so that the condition the classification of one of the co-channels, e.g. a second channel, between a base station and a mobile station can cause the reclassification of the other of the co-channels, e.g. the first channel, between the base station and the mobile station. Specifically, the first channel can be reclassified from a DTX to a TX or erasure depending on the conditions of the second channel.

Usuda is directed to a channel structure of a mobile communication system including a radio base station having a transmission antenna able to control a beam direction for each of a plurality of mobile stations in a cell. The mobile stations carry out radio communication using a shared channel together with an associated dedicated channel used in association with the shared channel. The shared channel is shared by the mobile stations and allocated to each of the mobile stations per predetermined unit transmission. A first pilot channel is set and dedicated used for channel estimation of the shared channel, and a second pilot channel is set and dedicatedly used for channel estimation of the associated dedicated channel.

Usuda is cited to show that co-channels are known in the prior art. In particular, Usuda apparently discloses that the claimed first channel and the second channel are

co-channel between the base station and the mobile station. To the extent that Usuda does disclose the concept of co-channels. The claims require that one co-channel of a connection between the base station and the mobile station affects the other co-channel. The description of channels, i.e. shared channel and pilot channels, found in Usuda does not include any concept of a change in a packet found in one of those channels affecting a packet in the other of those channels. Chang teaches that the factors of a channel between a base station and a mobile station may affect a channel between the base station and another network entity. In other words, a change in a packet in one channel can affect the next channel in a path. By adding the concept of co-channels from Usuda to Chang there is still missing the link that it can affect a co-channel where that co-channel is between the same entities in a network. This is what is missing, and Chang's teaching does not translate into the affect that one co-channel has in another co-channel between a base station and mobile station as required by the claims, furthermore, the reference of Usuda is performed in a different type of network.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
